

ABSTRACT OF THE DISCLOSURE

5 An improved self propelled fruit or berry harvester suitable to pick berries which grow on a
low bush or vine, such as cranberries. Typically the vines are stripped of fruit by a picking
head wherein said fruit is are carried by a conveyor and heretofore typically loaded into
storage bags mounted on the harvester for further transfer to shipping bins. The
10 improvement is directed to a picking accessory comprising an accessory conveyor for
loading stripped fruit directly into an associated collection bin employed as a shipping
container.
